Electronic Progress Documentation (Time-lapse)

Time-lapse photography is a valuable tool in the construction sector.

A time-lapse camera captures a frame at regular intervals, enabling us to track progress, monitor safety and document the entire construction process to stakeholders.

Electronic Progress Documentation (Time-lapse)

- 01 Archive and monitor your project's development by deploying high-end time-lapse camera systems.
- 02 Fully autonomous system that perfectly meets the requirements for mega-scale and long-term construction projects.

Customized secured web portal that is accessible from anywhere and any device that allows you to navigate between the different points of view of your construction cameras and compare the project progress by photos and auto-generated timelapse video throughout the project duration.
- 03
- 04 immortalize years of work on a construction site and showcase the final result.

Electronic Progress Documentation Features

- Fully powerless system with solar-charged cameras
- 220 degrees wide coverage cameras
- Cameras connected to the internet 24/7
- Customized live & secured web portal for each camera
- Auto-generated time-lapse videos (on the spot)
- AI edited time-lapse video upon request (within 1-2 hours)
- Fully owned or on rental base cameras

Added Value... Video Production

- Video shoot
- Drone shoot (where permissible)
- Photoshoot
- Video editing & production using time-lapse footage, video & drone rushes
